AQUEOUS GUARD® PLUS+

PROPERTIES / PRODUCT DESCRIPTION

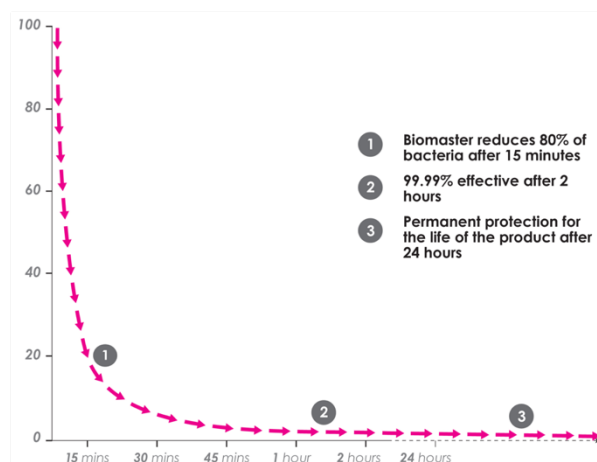

Aqueous Guard® Plus+ is an antimicrobial ceramic coating that incorporates Biomaster's antimicrobial silver additive providing the same benefits of original Aqueous Guard® but with added benefit of reducing bacterial levels on the surface, offering product protection.

Biomaster® antimicrobial technology complements regular cleaning regimes; offering round-the-clock product protection against harmful bacteria and mould, reducing bacteria levels by up to 99.9%.

Aqueous Guard® Plus+ Biomaster has three modes of action. When bacteria lands on an Aqueous Guard® Plus+ protected surface, they are prevented from growing, producing energy or replicating, therefore they die.

Aqueous Guard® Plus+ Biomaster® is incredibly durable and highly effective. Tested in thousands of applications, Biomaster is proven to reduce the overall level of most common types of harmful pathogens on product surfaces.

In typical tests to ISO 22196:2011 Biomaster® reduced levels of E.coli, MRSA, Listeria, Legionella, Salmonella, Campylobacter and Staphylococcus aureus by over 99%.

TECHNICAL DATA

UV: Stable

Binder base: Organic Silane/ SiO₂

Thickness cured: Up to 13um

Compatibility: Matte and gloss surfaces (always apply a test patch)

Hardness: Up to 9H

Part Number: G1ABP68

Appearance: Clear / Colourless liquid

Solvent base: Low VOC

Application: Roll and Tip / Hand Applied

Gloss Levels: High on glossy surfaces

Multiple coats: Yes if hand applied

Container sizes: 250ml (MOQ 1L)
